TITAN

Titan is the largest moon of Saturn. Larger than Mercury, Titan is the only moon in the Solar System known to have a planet-like atmosphere. Situated at 900 million miles from the Sun, its surface temperature is about -180C. Which makes it far too cold for life to exist.

FALL OUT

The names of eight creatures are hidden in this grid, but one letter from each name has fallen out. Can you name the eight creatures?
